Please find below and/or attached an Office communication concerning this application or proceeding.

1) Responsive to communication(s) filed on 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-10 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) is/are allowed. 6) Claim(s) is/are objected to. 8) Claim(s) is/are objected to. 8) Claim(s) is/are objected to by the Examiner. Application Papers 9) The specification is objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. §§ 119 and 120 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received. 13) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78. a) The translation of the foreign language provisional application or in an Application Data Sheet. 37 CFR 1.78.	· · · · · · · · · · · · · · · · · · ·	Application No.	Applicant(s)

DETAILED ACTION

Claim Objections

Claims 3 and 9 are objected to because of the following informalities:

Claims 3 and 9 are duplicate claims accordingly one of the claims should be deleted Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2 and 10 are rejected under 35 U.S.C. § 102(b) as being anticipated by U.S. patent 4,712,812 to Weir, III. The Weir device illustrates applicants invention in fig. 14 with a apparatus able to test the fluid tightness of pipes of different sizes comprising a new one piece main body 19 having a tubular wall

Application/Control Number: 10/619,312

Art Unit: 3679

with a chamber 27 that has at least two internally threaded wall portions 90,91 each one of said internally threaded wall portions having a different diameter (see fig. 14) whereby the main body can be screwed separately into at least two different diameter externally threaded pipes in a fluid tight manner. The one piece main body having a head portion connected with the tubular wall a head portion having a gauge port 92 in fluid communication with the chamber with a head portion and having a test fluid inlet port 90 located at the opposite end of the other threaded inlet 90 and in fluid communication with the chamber 27 and the gauge port 92. The gauge port 92 has the same configuration as a test inlet port 90 whereby a test gauge can be connected in either the gauge port for the fluid inlet port and a fluid supply line can be connected in either the fluid inlet port for the gauge port. As to claim 7 which claims that the wall has three internally threaded wall portions each having a different diameter whereby the main body can be screwed separately onto three different diameter externally threaded pipes in a fluid tight manner see column 10 which states that "additional sleeves or threads of various diameter in the respective universal fittings further reduces the number of fittings that are required for any particular piping job". This statement shows that the main body can include three internally threaded wall portions

Art Unit: 3679

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3,4,9 rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 4,712,812 to Weir, III in view of U.S. patent 3,760,842 to Mikiya.

As noted above the Weir, III device include all the features of the present invention however as to claims 3 and 9 it does not disclose a third port connected in fluid communication with the chamber and the gauge port and the fluid inlet port where in the third port would have the same configuration as the test inlet port and the gauge port. As to claim 4 Weir, III does not disclose a lead valve

connected to the chamber whereby a heightened being tested can be bleed without the disconnecting the fluid inlet member from the fluid inlet port. Mikiya discloses that it is known in the art to provide a *similar* type coupling with multiple ports 12 for an additional devices as needed and wherein one of those devices is a bleed or drain valve 53 to drain fluid or relieve pressure from the fitting body without having to remove the fluid inlet line. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide additional ports to the fitting body 19 of Weir, III such as taught by the multiple ports 12 of Mikiya, in order to provide an additional ports for devices as needed and further since it has been held that mere duplication of essential working parts of a device involves only routine skill in the art. Further, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a bleed valve such as drain valve 53 as taught by Mikiya to the fitting body 19 of Weir, III to drain fluid or relieve pressure from the fitting body without having to remove the fluid inlet line.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 4,712,812 to Weir, III in view of U.S. patent 2,956,737 to Hager.

As noted above the Weir, III device include all the features of the present invention however as to claims 5 and 6 it does not disclose a test fluid inlet member of having a manually engageable shutoff valve for selectively blocking for enabling fluid flow from the test fluid inlet member nor further having a hand pump engageable in the fluid test inlet port for supplying test fluid at low-pressure above atmospheric to the chamber and thereby to a pipe being tested. Hager discloses that it is known in the art to provide a hand pump 14 with a check valve 19 to and inlet port 12 to supply test fluid at low-pressure above atmospheric to the tank 11. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the fluid inlet port 90 of Weir, III with the hand pump 14 and check valve 19 assembly, in order provide a simple and easy way of providing pressure to the threaded fitting to pressurize pipes threaded there to and check any threaded connections.

Claim 8 is rejected under 35 U.S.C. § 103 as being unpatentable over U.S. patent 4,712,812 to Weir, III in view of U.S. patent 3,760,842 to Mikiya as applied to claims 3,4,9 above, and further in view of U.S. patent 2,956,737 to Hager. As noted above the Weir, III and Mikiya combination includes all the features of the present invention however as to claim 8 it does not disclose a test fluid inlet

member of having a manually engageable shutoff valve for selectively blocking for enabling fluid flow from the test fluid inlet member nor further having a hand pump engageable in the fluid test inlet port for supplying test fluid at low-pressure above atmospheric to the chamber and thereby to a pipe being tested. Hager discloses that it is known in the art to provide a hand pump 14 with a check valve 19 to and inlet port 12 to supply test fluid at low-pressure above atmospheric to the tank 11. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the fluid inlet port 90 of the Weir, III and Mikiya combination with the hand pump 14 and check valve 19 assembly, in order provide a simple and easy way of providing pressure to the threaded fitting to pressurize pipes threaded there to and check any threaded connections.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Nicholson whose telephone number is

(703) 308-0829. The examiner can normally be reached on Tuesdays thru Fridays from 7:30 to 6:00.
